General Guidelines for Tube Feeding Administration

Tube feeding formula must be handled carefully to prevent spoilage (just like food).

- Store your formula in a cool, dry place.
- Wash your hands before preparing or giving your tube feeding formula.
- Use a damp paper towel and wipe the top of the formula can before opening to prevent dirt from getting into the formula.
- Do not leave opened formula at room temperature for greater than 12 hours. If using powdered formula that is mixed with water or if using breast milk, fill the feeding bag with enough formula for four hours.
- Remember, once a can of formula has been opened, the unused portion needs to be refrigerated. Be sure to cover the top of the can with foil or plastic. Discard any unused formula after 24 hours.
- When it is time to add more formula or the maximum hang time has expired, rinse the bag out with water before adding more formula.
